Viewing Activity Reports
In Moodle
In the **People** block of the Main Course Page, click on **Participants**.
From the list of participants, pick a student and click on his/her name.
The student’s profile appears. Click on the **Activity Reports** tab in the middle of the screen.
There are several types of reports to view as shown below.
The default report is the **Outline Report** which will tell you basic information about the student’s activity, sorted by topic.
You can also choose the **Complete Report** which gives more detailed information.
Today’s Logs will show the instructor all the activity for a particular student for that day. A graph will display on top with a detailed list of activity shown below.
All Logs will once again display a graph, but will show you every time the student has accessed the course and what they have done.
